The presidents of Burundi, Swaziland/Eswatini, Tanzania, Ivory Coast and Haiti all opposed the main stream narrative on Covid and kicked against vaccines, they have all died!

“Coincidences” always seem to favor the globalists.

by [JD Rucker](#)

We took a lot of heat last week for publishing an article speculating that [Haitian President Jovenel Moïse was assassinated to usher in vaccines into his country](#). By “heat,” I’m not talking about the standard trolls or Twitter DMs. The site was hit by a massive wave of hack attempts that failed miserably. Praise God and thank you to my security firm!

The attacks are likely to ramp up after this article is released as it details the events surrounding two other world leaders who happen to have died to allow for Covid vaccines to be brought into their countries. Nobody other than [Free West Media](#) is covering it thus

far; I searched even the fringe sites I could find for a hint of speculation and it was notably missing. Maybe they don't know. Yet. Maybe they're fearful of the same types of attacks we suffered. Either way, we're ready to spread the word.

"Haiti, Burundi and Tanzania have something in common. Their presidents rejected covid-19 vaccines. Another thing they have in common is that all those Presidents have all died mysteriously".

Anonymous.

— Mazi Nnamdi Ossai (@andyonyebiafra) [July 28, 2021](#)

Here's the article by [Free West Media](#) followed by my commentary:

Coincidence? Three presidents dead after blocking distribution of Covid vaccines

The leaders of three different countries died after having stopped the distribution of the experimental Covid-19 jabs. All three countries took the decision to distribute the vaccines to their citizens only after their leaders passed away.

One of them was Haitian President Jovenel Moise, who was assassinated at his home in Port-au-Prince recently by a group of mercenaries.

The Presidents of Burundi, Swaziland, Tanzania, Ivory Coast & now Haiti have all been assassinated over past few months. The fake news media refuse to cover it. All 5 Presidents said the covid 'vaccine' would NEVER be allowed in their country.

"In recent months, Moïse had told several international diplomats that he believed he would be killed." <https://t.co/NxXIXfBnpM>

— Geneviève A. Douyon (@LovinHaiti) [July 28, 2021](#)

The president of Haiti said Ginger root is good for preventing this illness. He then was assassinated after refusing to bring the vaccine into Haiti.

— Viqui (@VictoriaOkonma) [July 31, 2021](#)

The Caribbean country has been eligible for free vaccines through the COVAX scheme, run by the World Health Organisation as well as global vaccine charities, but Moise had notably refused the AstraZeneca shots. Only days after his murder, the US [dispatched](#) vaccines to Haiti, together with a team of FBI agents.

This means that Haiti is now no longer the only country in the Western Hemisphere not to accept the Covid injection.

Hawu yeheni ngimangale kabi this morning...So Haiti did not have any covid 19 vaccines at the beginning of July then President is assassinated and US donates half a million vaccines, inoculation started this week already.

Soon after President John Magufuli of Tanzania had declared the vaccines dangerous, he passed away from a “heart ailment”. In February 2021, his health minister had told the media: “We are not yet satisfied that those vaccines have been clinically proven safe.” The death of the immensely popular Magufuli resulted in thousands of mourners crowding into a stadium to view his body. However, soon after Magufuli’s death, Tanzania ordered a huge shipment of the products worth millions of dollars for its 60 million citizens.

“You should stand firm. Vaccinations are dangerous. If the White man was able to come up with vaccinations, he should have found a vaccination for AIDS by now; he would have found a vaccination [for] tuberculosis by now; he would have found a vaccination for malaria by now; he would have found a vaccination for cancer by now,” Magufuli had warned in January, 2021.

Magufuli, a former chemistry teacher, also trashed PCR tests by demonstrating how a goat and a papaya fruit had both tested positive for Covid-19. Magufuli’s view on PCR tests is shared by the international trial lawyer Dr Reiner Fuellmich who has launched a historic class-action lawsuit in Germany and the US against Christian Drosten and the other scientists who created the PCR testing protocol used to “diagnose” Covid-19.

In November, 2020, an appeals court in Portugal had ruled that “the PCR process is not a reliable test for SARS-CoV-2, and therefore any enforced quarantine based on those test results is unlawful”. The judges, Margarida Ramos de Almeida and Ana Paramés, referred to several pieces of scientific evidence showing that in PCR tests with 35 cycles or more the accuracy dropped to three percent, meaning up to 97 percent of positive results could be false positives.

In March this year, an Austrian administrative court acknowledged the limitations of PCR and antigen testing in use currently, ruling that “PCR tests have no diagnostic value”. This view was echoed in April by a German court in Weimar, stating that PCR tests were not “suitable for determining an ‘infection’ with the SARS-CoV-2 virus”. It also ordered the lifting of various restrictions in the region.

Burundi was the second African country to reject Covid shots in February this year. The health minister of the African nation, Thaddee Ndikumana, told reporters that prevention was more important, and “since more than 95 percent of patients are recovering, we

estimate that the vaccines are not yet necessary”.

Burundi's late President Pierre Nkurunziza was harshly criticized for not advancing the notion of injections against SARS-CoV-2. Remarkably, the current President Evariste Ndayishimiye now describes the virus as Burundi's “worst enemy”.

Last Man standing. Hoping the Eritrean president won't die of a 'heart attack':

AFP | 2 days ago

NAIROBI, KENYA – Burundi, one of the last countries in the world to start inoculating its population against Covid-19, said it has agreed to take Covax vaccines — but with a condition.

Our colleague @EWKaneza's latest on Burundi accepting COVID-19 vaccines, becoming one of the last countries in the world to embrace them.

But President Ndayishimiye's government says it will not take responsibility for any side effects they might cause. <https://t.co/xVsd8CfXQR>

In the most vaccinated countries, like Israel, the UK or the Seychelles, and especially in Gibraltar which boasts a 100 percent vaccination rate, the alleged delta variant now doubles every 3 days. Perhaps the current 23 cases is not significant, but 23 cases in an area with 35 000 inhabitants is the equivalent of 45 000 cases per day in a country like France.

And it has been more than a month and a half since 100 percent of the population of Gibraltar was vaccinated with two doses. This “paradise” for the vaccinated vindicates the hesitation of the Africans to take part in the mass experiment.
